2018

66.8%

X Class

Dundlod Public School

2015

CGPA: 9.4

PERSONAL PROJECTS

Wormhole Attack Detection And Prevention In Wireless Networks

- In today's era, as wireless technology is advancing, there is a high demand and availability of wireless devices thus making MANETs more common and popular. With this, security of such networks comes at a risk which lures attackers to exploit MANETs routing protocols.
- Explored wormhole attack variants, their impacts on MANETs and then purposed our own solution.
- NS2 was used to demonstrate these attacks.

Garden Care Website

- This website will help people who want to grow plants and vegetables on their own but don't know where to begin or don't have proper knowledge about gardening.
- Skills Used - HTML/CSS, BootStrap, JavaScript, Firebase.

FoodNest (Food Ordering Website)

- FoodNest is an online canteen food ordering and management system that provides multiple food options. Through this application, the patron/customer and the vendor can interact with each other by spending less time to place orders for the food items of their like from the list.
- Skills Used - HTML/CSS, BootStrap, JavaScript, PHP, SQL.
